ZERO ENERGY CONSUMPTION The way to achieve maximum comfort while respecting the environment

The concept of zero energy consumption without sacrificing maximum comfort is the challenge of this villa. It consists of integrating nature and open spaces in a design and luxury home, with the aim of practically eliminating the environmental impact.

This house uses renewable energy to supply all its needs, making it an energy self-sufficient villas. All these economic and environmental benefits do not detract from the aesthetics and luxury of the villa.

To achieve this, a geothermal system with solar panels and battery accumulation generate enough energy to satisfy all the consumption of the house in one year, as well as an equivalence to 60,000 kms a year of an electric car. All this can be achieved without sacrificing aesthetics, good materials and the greatest exclusivity.
